

Philips SpeechLive is a subscription-based, cloud dictation and transcription solution, allowing users to create written documents from their recordings both from their desk or on-the-go. Simply record using your smartphone or dictation device, send the recording to the transcription option of your choice, and receive your transcribed document. Speak, send, done.

## SpeechLive works with smartphones and all Philips voice recorders

You can use SpeechLive with your Philips voice recorder, your smartphone or even both at the same time. The Philips Voice Recorder App allows you to record, edit, and send recordings straight from your smartphone. Or use any Philips voice recorder to dictate on-the-go. With SpeechLive, you can work from anywhere, with any device.

## Flexible working, transcribe from anywhere

Philips SpeechLive offers a flexible working environment. If your assistant cannot come into the office one day, they can easily transcribe documents from home by using their private computer. There is no need to download any additional software, all they have to do is log into their SpeechLive account. SpeechLive allows your assistants to access the file list and playback the recordings with a Philips foot pedal via the web player in their browser, regardless of where they are.

## Maximum protection of your files

SpeechLive guarantees the highest protection of your files and keeps your confidential data safe from unauthorized access. The most advanced encryption standard available protects your data during recording, uploading and downloading to the cloud. SpeechLive offers double encryption in real-time by using HTTPS protocol.

### Working anywhere and anytime

Access and manage your dictations through your browser from anywhere. Transcription from home is also no longer a problem, as you can safely use your private computer to playback and transcribe recordings

### Excellent workflow management

Adapt the solution to your company's way of working. Administrators can easily define authors and typists, as well as assigning the workflow from anywhere in the world, to balance workload.
